PROFESSIONAL SUMMARY

Software engineer and technical founder with experience building interactive applications, immersive technology, developer tools, web platforms, and experimental AI systems. Skilled across C++, C#, Python, Unity, Unreal Engine, React, and modern cloud platforms. Currently studying Computer Science at Full Sail University and continuing to strengthen software architecture, systems programming, debugging, and clean-code practices.

TECHNICAL SKILLS

Languages: C++, C#, Python, JavaScript, HTML, CSS, SQL
Development: Object-Oriented Programming, Data Structures, Debugging, Input Validation, File I/O, Command Parsing, Git, GitHub
Tools & Frameworks: Visual Studio, Unity, Unreal Engine, React, Next.js, Supabase, Vercel
Specialties: AR/VR, Interactive Applications, Simulation, AI Agents, Developer Tools, Web Applications

TECHNICAL EXPERIENCE

Founder / Software Engineer

Wizbang International

- Design and develop software products spanning web applications, immersive technology, automation, AI systems, and developer tools.
- Build prototypes and production systems using C++, C#, Python, JavaScript, Unity, Unreal Engine, React, and cloud services.
- Lead technical architecture, product development, debugging, deployment, and iterative feature development.
- Translate early concepts into working software while balancing usability, maintainability, and technical scope.

Software / Immersive Technology Engineer

- Developed interactive AR, VR, simulation, and visualization experiences using Unity, Unreal Engine, and related immersive platforms.
- Contributed to interactive installations and experiences for organizations and brands including National Geographic and major event/exhibit environments.
- Worked across application architecture, user interaction, 3D systems, performance optimization, and hardware integration.

PROJECTS

Gizmo | C++ Scripting Language

C++, Visual Studio, Git, GitHub

Built a lightweight scripting language and interpreter from scratch in C++.

- Implemented variables, arithmetic, comparisons, `if/else`, repeat loops, and while loops.
- Added nested commands and chained command execution using `;`.
- Added `.giz` script execution and save/load persistence.
- Built runtime input validation, error recovery, EOF handling, and infinite-loop protection.
- Refactored repeated parsing and numeric logic into reusable helpers.
- Separated persistence functionality into its own class to improve maintainability.
- Used GitHub Issues, Project boards, branches, commits, and Pull Requests throughout development.

Daily Knowledge Garden

Automation, GitHub Actions, Web Development

Built an automated information pipeline that collects and publishes organized daily knowledge content through GitHub Pages.

- Automated content generation and publishing using GitHub Actions.
- Integrated multiple news and knowledge sources.
- Built error handling and workflow improvements for unreliable external feeds.
- Published continuously updated content through GitHub Pages.

EDUCATION

Full Sail University

Simulation Engineering BA

Expected completion 2027

Relevant coursework includes:

- Programming
- C++ Development
- Object-Oriented Programming
- Systems Programming
- Discrete Mathematics
- Software Project Development
- Git and Version Control

CERTIFICATIONS

Certified ScrumMaster (CSM)
